Abstract: newline The research successfully demonstrates that it is possible to identify core and excellence competencies in Indian organizations. It does this by making an in-depth study of one focus institute in the area of health services and health education: a major orthopaedic hospital. This institution was chosen because it is in the private sector, considered highly successful, with a good research culture and wishes to be competitive both nationally and internationally

Application of Correlation in real-life problems. For e.g. a researcher suggested that taller people have higher self-esteem. After analyzing his data and coming up with an r-value of .08, he abandons his hypothesis because the two variables do not appear to be strongly related at all. Another area where correlation is used is in the study of intelligence where research has been carried out to test

the strength of the relationship between the I.Q. levels of identical and non-identical twins. In medical studies, correlation is used widely and one e.g. is the study to test if glucose level is re
