Résumé : The purpose of the INEER Innovations Series, of which the present book is the latest edition, always has been to stimulate mutual progress through international collaboration. This book concerns innovations in teaching and learning in engineering education. Authors hail from several different countries and provide accounts of changes stimulated by technological progress. New technology has provided teachers and students with new opportunities. New directions are being opened in curricula and in teaching methods. The authors in this volume describe their ideas and practices in pursuit of these new directions.
