This collective volume evolved from a two-year research seminar on contests over ecologies in southern Africa, Latin America and Australia. The product of three writing workshops over that period and visits by writers from further afield, the book offers a suite of Southern chapters that attend to contests over notions of 'nature', science, and environment - without relying on the notion of cultural difference, or on an indigenous knowledge / science divide. After the introductory article Contested ecologies: nature and knowledge (Lesley Green), contributions on Africa include: On animism, modernity/colonialism, and the African order of knowledge: provisional reflections (Harry Garuba); Cultivating 'krag', refreshing 'gees': ecologies of wellbeing in Namaqualand (South Africa, Joshua B. Cohen); Are petitioners makers of rain? Rains, worlds and survival in conflict-torn Buhera, Zimbabwe (Artwell Nhemachena); Metaphors for climate adaptation from Zimbabwe: Zephaniah Phiri Maseko and the marriage of water and soil (Christopher Mabeza); Cape flats nature: rethinking urban ecologies (South Africa, Tania Katzschner); Spotting the leopard: fieldwork, science and leopard behaviour (Ian Glenn).
